Summary

Applied AI Engineer with an MSc in Robotics, specialising in integrating Large Language Models and developing agentic systems for enhanced interaction workflows. Expertise in RAG systems, adversarial safety testing, and building scalable AI applications using Python, Docker, and AWS. Proven ability to translate complex AI concepts into dependable customer experiences and drive technical direction for AI products in production environments.

Experience

Startup Ecosystem Associate Dec 2025 — Present
Upwork UK

- Defined **technical specifications for AI model implementation**, ensuring alignment with business objectives to accelerate project delivery and validate system integrity.
- Delivered **technical demonstrations of AI products**, clearly articulating the value and functionality of **AI/ML workflows** to diverse client groups.
- Resolved **complex technical queries within AI-enabled service** operations, **maintaining system reliability and increasing service** accuracy and client satisfaction.

Production Engineering Intern Jun 2025 — Jul 2025
Hyundai Motors Pvt. Ltd. India

- Automated **quality validation for robotic production systems** across assembly lines, saving over **10 technician-hours daily** and improving system consistency.
- Analysed operational performance datasets** to identify efficiency trends, preventing production line stoppages through continuous process optimisation.
- Generated structured production reports** to track throughput and **quality metrics, reducing manual data consolidation hours** weekly while ensuring strict compliance.

Projects

Adversarial Safety In Embodied AI – LLM Attack & Defence System

- Designed an adversarial framework for **LLM-powered agents within simulated ecosystems** using **Anthropic Claude and Ollama models**.
- Implemented prompt injection testing** to evaluate and enhance the robustness of **AI systems against adversarial attacks**.

Gen AI Integration with Robotic Systems

- Integrated advanced language models with robotic platforms to enable real-time natural language understanding and interaction.
- Applied prompt engineering techniques** to optimise behavioural control and **decision-making processes for enhanced robotic performance**.

Rescue Agent (Hackathon Project)

- Developed a **Streamlit application utilising AWS Strand and Qwen 3.5 to manage food redistribution workflows** efficiently.
- Validated system reliability and accuracy through an internal pilot evaluation, using **3 driver and 50 food-specification datasets**.

Education

MSc Robotics Sep 2025 — Sep 2026
Heriot-Watt University Edinburgh, United Kingdom

Bachelor of Engineering (B.E.) in Mechatronics Engineering Jun 2021 — 2025
Kongu Engineering College India

Skills

Languages : Python

AI & Machine Learning : Large Language Models (LLMs), RAG (Retrieval Augmented Generation), Prompt Engineering, LLM Fine-Tuning, Machine Learning, AI Safety, Responsible AI, Adversarial Testing, Git, Streamlit

DevOps & Cloud : Docker, AWS, Kubernetes

AI Platforms : OpenAI API, Anthropic Claude, Ollama, Hugging Face
